PET Tiger is revolutionizing Management. Compatible with a wide range of wireless devices including Android, Apple, and Windows, PET Tiger can collect data from virtually any type of device including a variety of biometrics. This allows it to provide innovative payroll solutions and real-time data collection, tracking, and monitoring.

With PET Tiger, managers can track productivity down to the field and individual worker. Ruggedized Bluetooth or RFID scanners with smart devices measure worker productivity and transmits it back to the main office.

Allowing for multiple states and accounting systems all within a single database, this all-inclusive system, collects data from all areas of the operation such as the fields, packing houses, greenhouses, coolers, and offices.

PET Tiger can also keep you in compliance with worker rights regulations. Recording and monitoring break time, ensuring compliance with minimum wage laws are simplified with the system.

By creating efficiency guidelines you can transform your management in ways you never realized before. By collecting piece-rate data in real time you can radically change your employee's performance as well as your bottom line.

Since PET Tiger is a modular system it allows users to purchase only the parts relevant to their needs. Providing its users another tool to tailor the system to their policies as well as government regulations.

The Training Module can record employee training including safety and breaks, as required by law. This allows for easy employer verification and expedites the process to provide reports for OSHA auditors as well as generating training certificates for employees.

The Bonus Module calculates bonus pay based on employee performance, additional hours for specific jobs, as well as Fair Food Premiums.

PET Tiger data mapping provides an interactive visual display of the status of a company's labor force and the equipment in use. With this tool managers can make informed decisions wherever they are.

Contract labor data can easily be incorporated as well using the Time Sheet Data Entry module. The PET Tiger Billing Module provides the ability to create customers' invoices each time they generate payroll, ensuring all billable time is included.

Orange Enterprises continues to work closely with its individual clients to refine the PET Tiger from purchase to implementation.

With today's escalating labor prices, intense regulations, as well as, the scarce accessibility to a trained labor force, an effective management tool is crucial. PET Tiger utilizes the latest technological innovations to optimize and manage the return from your employed labor crews.

Via PET Tigers scalability to your operations size and unique needs, we will tailor for you the best possible software and hardware configuration. Scanners, Smart devices, GPS, RFID, Biometrics, Software Modules and options will be assembled to maximize the efficiency of your operation.

For more information on deploying PET Tiger in your operation, contact Udi Sosnik.
