PET Tiger - The Leader in Real Time Data Collection

As we rely more on technology, Ag operations are turning to mobile devices to electronically record and transmit labor and productivity data to the office in real time. The PET Tiger system is a comprehensive solution that accommodates all agribusiness.

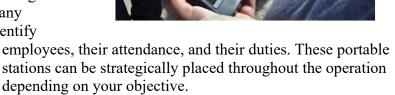

PET Tiger manages every aspect of labor and productivity in your operation; your field workers, labor contractors' field workers, packing house employees, equipment, administration, as well as all other employees in their respective positions. PET Tiger creates its own badges and works in conjunction with a variety of devices to carry out the data collection and transmission processes to meet the diverse needs of your operation.

Leaders in the Ag industry are using PET Tiger to manage their operations. Each user has a unique configuration for collecting data from multiple types of devices into one central database. Payroll data is sent to any accounting system or service. Any size operation, from the family farm to global enterprises can benefit from this paperless and wireless system.

The capability of **smart devices**, such as iPhone, iPad, Android and Window's products goes one step beyond data collection. They are able to retrieve and send information via PET Tiger; for payroll, cost accounting, labor contractor reports, billing, compliance, management and logistics.

Biometric devices recognize employees by scanning their hands, fingers, facial recognition, proximity or any combination. These capabilities allow you to identify employees, their attendance, and their duties. These portable stations can be strategically placed throughout the operation depending on your objective.

Scan stations collect data using a gun-style barcode scanner and can store it to a file on a PC/ laptop or be linked directly to the server. Data collected at these stations, will be used to manage productivity, and to create job cards that will automatically calculate overtime earnings, bonus payments as well as verification of mandated breaks and training.

For capturing data, there are a variety of **"dumb" devices**, such as batch scanners, which capture and log data as a job is carried out. They record data both by time and by piece.

In real time all data collected on these devices is immediately available to managers who are able to track what is happening in every facet of the operation. The power of the PET Tiger system is that it is developed to work within your existing parameters. The wireless and real-time capabilities are priceless features of this inclusive labor management solution.

The comprehensive **HR module** provides users the ability to create, print and manage hiring reports like the I9 and W4. A log is created within the program for auditing purposes. PET Tiger stores scanned documents in the employee record. In-the-field hiring can be accomplished as well.

PET Tiger's **Bonus module** facilitates the creation of bonus pay for supervisors and employees. Variables like number of employees, employees' hours, pieces picked/packed, weight and quality are all considered. A simple screen is available for the user to select the desired variables and create the bonus pay.

The complexities of your delivery **drivers' pay** are also managed with PET Tiger. Basic input screens are available for your drivers to complete at the end of each day. The driver selects which jobs were performed and enters the length of time for each, mileage pay is also calculated.

Safety and other **training data** can be recorded and verified in PET Tiger. There are many reports including a Certificate of Completion and training logs. The training information is sent out to the Pocket PET program. The system then restricts the users from timing an employee in for jobs or equipment that they have not been trained for.

The PET Tiger **Mapping module** visually provides, on a map, the status of a company's labor force. At any given time you can click on the flag in a map and see who is working in the field, what task is being performed, how much productivity has been achieved and what equipment is being used etc. This feature allows supervisors, managers or owners the ability to make decisions while in or out of the office. The maps are accessible on any mobile device with internet access like smartphones, iPhones, tablets as well as laptops or PCs.

Packing houses manage product label traceability with PET Tiger. Employees are assigned labels with a series of barcodes. Those labels are scanned into PET Tiger along with the employees' barcode. The employee places their sticker on each piece handled. This tracks their pieces completed and provides trace back for each clam shell, carton, sack or box.

Onsite and online installation and training are available to all users. PET Tiger also provides extensive help screens within the program. Orange Enterprises, Inc. works with users to tailor the system to their needs

The ability to collect and manage your entire operation's labor and productivity can be at your fingertips 24/7. Functionality like parts inventories, fuel tracking, and irrigation management are other modules available within the PET Tiger system. PET Tiger provides a complete solution to track your labor data, productivity, piece counts, cultural activities, packing, shipping, and traceability.

Orange Enterprises, Inc. incorporates the newest mobile technology into today's payroll accounting software giving its user a seamless, paperless and wireless labor tracking solution.

For more information on deploying PET Tiger in your operation, contact Udi Sosnik.
